### General Information

---

#### How to Order

Our system is easy, first determine a wood type. Then choose a door style, panel profile, frame profile, and edge profile.

**\*\*Panel refers to the profile of the center panel of the door. Doors have vertically running grain center panel. Framed drawer fronts have horizontally running grain center panel.**

**\*\*Frame profile refers to the profile on the inside edge of the door stile & rail assembly. Standard Stile & Rail width is 2 1/4".**

**\*\*Edge profile refers to the profile on the outside edge of the door. All four outside edges of the door/drawer front will be edged the same unless otherwise indicated.**

**\*\*Style refers to the design of the center panel and/or top & bottom rail.**

Print exact door sizes on our order form. Orders can be faxed to 989-867-4301 or emailed to [ballards@avci.net](mailto:ballards@avci.net)  
All orders are custom made at the time of order. Changes made after the start of production will require an additional service charge. Be sure all sizes and information is correct, we are not responsible for improper or incorrect information.

#### Specifications/Tolerances

All surfaces are finish sanded to 150 grit.

Final door thickness.....13/16" (+/-/32")

Finished panel thickness(raised).....5/8"

Finished panel thickness(P-3).....1/2"

Finished panel thickness(P-4).....+3/16"

Finished size tolerance width & Height.....+/-1/16"

Plywood center panels (P-4) available in oak and maple only.

Solid wood center panels are constructed of laminated random width stock

Door framework is standard style and rail joinery.

Miter frame doors feature blind tenon construction.

Our framed doors utilize Spaceballs in the framework to help compensate for natural expansion & contraction, and to center the panel within the door framework.

#### Dovetailed Boxes/Rollout Trays

Our hardwood dovetailed drawer boxes/rollouts are available unfinished or clear coated with laquer. They feature full 3/4" solid hardwood front, back and sides with a eased top edge inside and out.

And 1/2" plywood bottoms featuring blind dado construction with 1/2" recess on the bottom.
